This type of problem involves relationships between the length and width and/or connections between the length, width, and diagonal of a rectangle. With information about the area or perimeter, we can set up equations that allow us to find the rectangle's length and width. Once these are known, we can use the formulas for area and perimeter.

Word Problems: Area and Perimeter of Rectangles

A typical problem involving the area and perimeter of a parallelogram gives us the area, perimeter and/or base, height, and an angle of the parallelogram. We may also be given a relationship between the area and perimeter or between the base and height of the parallelogram. We need to calculate some of these quantities given information about the others.
