### **Current Topics In Astrophysical Physics**

In physics, redshift is a phenomenon where electromagnetic radiation (such as light) from an object undergoes an increase in wavelength. Whether or not the radiation is visible, "redshift" means an increase in wavelength, equivalent to a decrease in wave frequency and photon energy, in accordance with, respectively, the wave and quantum theories of light.

#### **Redshift - Wikipedia**

Lo spostamento verso il rosso (chiamato anche effetto batocromo o, in inglese, redshift) è il fenomeno per cui la luce o un'altra radiazione elettromagnetica emessa da un oggetto ha una lunghezza d'onda maggiore rispetto a quella che aveva all'emissione. Ciò equivale a dire che nel caso della luce il colore va nella direzione dove è il rosso, l'estremo inferiore dello spettro del visibile.
