Mixing alcohol with painkillers can be a deadly combination. The general rule of thumb is not to drink alcohol if you are taking certain types of painkillers and over-the-counter (OTC) analgesics

What Are the Effects of Mixing Painkillers and Alcohol?

Buprenorphine, sold under the brand name Subutex, among others, is an opioid used to treat opioid addiction, acute pain, and chronic pain. It can be used under the tongue, by injection, as a skin patch, or as an implant. For opioid addiction it is typically only started when withdrawal symptoms have begun and for the first two days of treatment under direct observation of a health care provider.

Metadone - Wikipedia

Metadone (o metadone) è un farmaco sinttico, usato in medicina come analgesico nelle cure palliative e utilizzato per ridurre l'assuefazione nella terapia sostitutiva della dipendenza da stupefacenti. È stato sintetizzato in Germania nel 1937; pur chimicamente differente dalla morfina o dall'eroina, agisce come queste ultime. È un oppioide sinttico, derivato dalla morfina, che agisce sui recettori oppioidi. È utilizzato per il trattamento del dolore e per la terapia sostitutiva della dipendenza da oppioidi. È un farmaco a lunga durata d'azione, con un'efficacia analgesica simile a quella della morfina. È un farmaco a lunga durata d'azione, con un'efficacia analgesica simile a quella della morfina. È un farmaco a lunga durata d'azione, con un'efficacia analgesica simile a quella della morfina.
