Sense of smell. The perception of odors, or sense of smell, is mediated by the olfactory nerve. The olfactory receptor (OR) cells are neurons present in the olfactory epithelium, which is a small patch of tissue at the back of the nasal cavity. There are millions of olfactory receptor neurons that act as sensory signaling cells.

The New Zealand Waste Strategy defines waste as: "any material, solid, liquid or gas, that is unwanted and/or unvalued, and discarded or discharged by its owner". As we saw in Section 1, in many cases what people call waste is capable of being re-used. There is also value in that re-use, especially if you think of the environmental impacts of simply discarding it.

2. Wastewater - What is it? | Ministry for the Environment

Certain chemical characteristics of the animal manures are not adequate for composting and could limit the efficiency of the process: excess of moisture, low porosity, high N concentration for the organic-C, which gives a low C/N ratio, and in some cases high pH values (). Thus, adequate composting management of the manure is required in order to obtain a quality compost.

Composting of animal manures and chemical criteria for ...

Introduction. Many cancer patients live with the knowledge that their disease is both progressive and incurable. For a significant minority of these people this reality may be present in the form of a malodorous, exuding, necrotic skin lesion, which can be a constant physical reminder of disease progression. These lesions are commonly known as 'fungating wounds', the term 'fungating ...

Part 1: Symptom control in the management of fungating wounds

1. Introduction. Malaysia uses 99% water supply for domestic use from surface water, while another 1% of the supply from groundwater. Total internal Malaysia water resources are estimated about 580 km³/year and 30% water withdrawal is for municipal uses. Water supply mainly from surface water and groundwater was treated and distributed to consumers as tap water, bottled drinking water and ...

Cattle—colloquially cows—are the most common type of large domesticated ungulates. They are a prominent modern member of the subfamily Bovinae, are the most widespread species of the genus *Bos*, and are most commonly classified collectively as *Bos taurus*. Cattle are commonly raised as livestock for meat (beef or veal, see beef cattle), for milk (see dairy cattle), and for hides, which are ...
