

Past Glacial Environments

Past Glacial Environments

Online exhibits: Geologic time scale: Cenozoic Era. The Holocene Epoch. To observe a Holocene environment, simply look around you! The Holocene is the name given to the last 11,700 years* of the Earth's history — the time since the end of the last major glacial epoch, or "ice age."

The Holocene Epoch - UCMP

The Quaternary glaciation, also known as the Pleistocene glaciation, is an alternating series of glacial and interglacial periods during the Quaternary period that began 2.58 Ma (million years ago), and is ongoing. Although geologists describe the entire time period as an "ice age", in popular culture the term "ice age" is usually associated with just the most recent glacial period.

Quaternary glaciation - Wikipedia

Etymology and related terms. The word glacier is a loanword from French and goes back, via Franco-Provençal, to the Vulgar Latin glaciārium, derived from the Late Latin glacia, and ultimately Latin glaciēs, meaning "ice". The processes and features caused by or related to glaciers are referred to as glacial. The process of glacier establishment, growth and flow is called glaciation.

COLLEGE OF THE ENVIRONMENT EARTH AND SPACE SCIENCES Detailed course offerings (Time Schedule) are available for. Spring Quarter 2019; Summer Quarter 2019; Autumn Quarter 2019

EARTH AND SPACE SCIENCES - University of Washington

1. Introduction. The glacial history of the Arctic Ocean involves the build-up and decay of marine-based ice sheets on the continental shelves, the development and disintegration of ice shelves, and significant changes in ocean-circulation regimes and sea-ice cover.

Arctic Ocean glacial history - ScienceDirect

Ice Sheets (Continental glaciers) - are the largest types of glaciers on Earth. They cover large areas of the land surface, including mountain areas. Modern ice sheets cover Greenland and Antarctica. These two ice sheets comprise about 95% of all glacial ice currently on Earth.

Glaciers and Glaciation - Tulane University

Introduction. Several definitions exist for the term periglacial. The earliest definitions suggested that these geomorphic environments were located at periphery of past Pleistocene glaciers. In these environments, the landscape is dominantly influenced by frost action.

Quaternary, in the geologic history of Earth, a unit of time within the Cenozoic Era, beginning 2,588,000 years ago and continuing to the present day. The Quaternary has been characterized by several periods of glaciation (the "ice ages" of common lore), when ice sheets many kilometres thick have covered vast areas of the continents in temperate areas.

420,000 years of ice core data from Vostok, Antarctica research station. Current period is at right. From bottom to top: * Solar variation at 65°N due to en:Milankovitch cycles (connected to 180). * 18O isotope of oxygen.

Ice core basics - Antarctic Glaciers

3.1.1 Water and carbon cycles . This section of our specification focuses on the major stores of water and carbon at or near the Earth's surface and the dynamic cyclical relationships associated with them. These are major elements in the natural environment and understanding them is fundamental to many aspects of physical geography.
