1980s. In the 1980s, 16-bit and 32-bit microprocessors were common among new designs, and CMOS technology overtook NMOS. Transistor count increased dramatically during the decade. The home computers of the 1980s predominantly used processors that were introduced in the 1970s. Versions of the MOS 6502, first released in 1975, and the Zilog Z80 (1976), were at the core of many of the home ...

The following is a list of 7400-series digital logic integrated circuits. The original 7400-series integrated circuits were made by Texas Instruments with the prefix "SN" to create the name SN74xx. Due to the popularity of these parts, other manufacturers have released pin-to-pin compatible devices which kept the 7400 sequence number as an aid to identification of compatible parts.
