Before you click any link or enter your personal information online, ask yourself if this looks legit. If it's an email, check the email address the message came from. Online scams will often attempt to hide who originally sent the email - see if the sender is someone you know and if you recognize the email address.

Pharming is a cyber attack intended to redirect a website's traffic to another, fake site. Pharming can be conducted either by changing the hosts file on a victim's computer or by exploitation of a vulnerability in DNS server software. DNS servers are computers responsible for resolving Internet names into their real IP addresses. Compromised DNS servers are sometimes referred to as "poisoned".
